

RTI_LOAD_DATABASE Function

Description

Programmatically loads a DBT file.

Syntax

```
error = RTI_LOAD_DATABASE( databaseID )
```

Parameters

The function has the following parameters:

Parameter	Description
<i>databaseID</i>	The database name to load.

Returns

Boolean. If successful null is returned. If there is an error a boolean true is returned.

Remarks

The RTI_LOAD_DATABASE function uses [Set_Status\(\)](#) to set error codes. To determine the error received use [Get_Status\(\)](#) after the RTI_LOAD_DATABASE call.

Example

```
* Load MYDB.DBT
error = RTI_LOAD_DATABASE( "MYDB" )
if error then
    status = Get_Status(errCodes)
    call FsMsg( errCodes )
end
```
