

Select Statement

Description

Creates a latent cursor of keys for an opened native table.

Syntax

Select *table_var*

Parameters

The Select statement has the following parameters.

The order the keys are returned in is dependent on the filing system.

Example: Processing the CUSTOMERS table.

```
declare function Set_FSError
open "CUSTOMERS" To customers_table else
    status = Set_FSError()
    return
end

select customers_table

Done = 0
loop
ReadNext @ID else Done = 1
Until Done Do
    read @RECORD From customers_table, @ID else
        status = Set_FSError()
        return
    end

    * processing logic here ...
    GoSub PROCESS
Repeat
return 0

PROCESS:
    /* process the row */
return
```
