Set_Dialog_Info Function

Description

Sets the information associated with a dialog box.

Syntax

status = **Set_Dialog_Info** *(dialogname, owner, inparam, ownparam, outparam)*

Parameters

The Set_Dialog_Info function has the following parameters.

Parameter	Description
Dialogname	Specify a valid window identifier.
Owner	The identifier for the owner window. Can be null if the dialog box exists.
Inparam	Input parameter (passed to CREATE event).
Ownparam	Parameter used by dialog box itself. Can be set using this function only.
Outparam	Parameter used to pass result to calling process. Set by End_Dialog.

Any delimiters except for @RM can be used as parameters. Status is true if block of parameters exists, otherwise false.
