Set_EventStatus Function

Description

Sets the status of an event forwarded from within an event handler.

Syntax

truevalue = Set_EventStatus (status, code, args)

Parameters

Parameters associated with Set_EventStatus are as follows.

Parameter	Description		
Status	The value that you want to set the status to:		
	Value	Description	
	-1	Append a status code to list; if the list is empty, a Failure code is assumed.	
	0	Success.	
	1	Failure.	
Code	Contains the code indicating the exact nature of the error. Typically, this is a 3 character alphabetic character followed by a number.		
Args	This contains @FM or @VM-delimited list of arguments associated with the error codes.
