# SetMinimumDelimiter Subroutine

## Description

Establishes the minimum system delimiter value.

## Syntax

**SetMinimumDelimiter**(*value*)

## Note

This is the programmatic equivalent as checking a Minimum Delimiter Setting in the System Editor.

The SetUTF8 subroutine has the following parameter.

| Message | Description |
|---|---|
| value | 0 = no delimiters<br>240 to 255 = decimal value of minimum system delimiter |

## See Also

GetMinimumDelimiter()

## Example

```
declare function GetMinimumDelimiter
* set minimum delimiter to @TM (Char(251))

call SetMinimumDelimiter(251)

* delim will contain the decimal number 251 after the function call
delim = GetMinimumDelimiter()
```
