

CELLPOS

Applies to

Edit table.

Description

With Set_Property, allows you to enter data to or retrieve from a specific cell of an edit table.

Usage

value = **Set_Property** (*myedittable*, "CELLPOS", *text*, *position*)

value = **Get_Property** (*myedittable*, "CELLPOS", *position*)

Remarks

Acts as a combination of ACCESSPOS and ACCESSDATA. Parameter position is an @FM delimited array of column number and row number
