

# CONV

## Applies to

Edit box, edit line, edit table.

## Description

Returns the output conversion specification for the named control.

## Usage

Return the output conversion:

*outputconversion* = *Get\_Property* (**objectname**, **"CONV"**)

## Returns

Value returned by *Get\_Property*:

Value	Description
<i>outputconversion</i>	If an output conversion specification exists for the named control, then it is returned in <i>outputconversion</i> . If there is no output conversion for the specified control, null is returned. For an edit table, returns an @SVM-delimited array of conversions for columns.
