DDEMODE

Applies to

Edit line, edit box.

Description

Used only with Get_Property, returns the connection mode for the current DDE session.

Usage

mode = **Get_Property** (*editlinename*, "**DDEMODE**")

Remarks

The value returned in mode is one of the following values:

Value	Description
HOT	Server sends DDEADVISE event as soon as data changes.
WARM	Server sends notification of changed data.
AUTO	Server automatically updates data when change occurs (no event is triggered).
COLD, OFF	No notification is available from the server.
