

LIMIT

Applies to

Combo box, edit table, list box, edit line, edit box.

Description

Returns count of items in a control. For an edit table control, the LIMIT property returns a count of columns, with a count of rows @FM-delimited from that column value. For example, an edit table that has three columns with two rows in each column will return 3:@FM:2. You can use Set_Property to limit the length of the text that the user can enter into an edit control (edit line or edit box).

Usage

itemcount = **Get_Property** (*objectname*, "LIMIT")

itemcount = **Set_Property** (*objectname*, "LIMIT", *limit*)

Returns

Values returned by Get_Property:

Value	Description
<i>itemcount</i>	Number of items in the specified control. When control is an edit table, <1> is the number of columns; <2> is the number of rows.
<i>Limit</i>	Limit size to the length of the text the user can enter in the control. If this param is 0, the text length limit is set to 65,535 bytes.
