

LIST

Applies to

Combo box, edit table, list box.

Description

Returns or sets the items that appear in the list box or drop-down list box. For an edit table control, the value returned or passed separates column data from row data.

Usage

itemlist = **Get_Property** (*objectname*, "LIST")

existingprop = **Set_Property** (*objectname*, "LIST", *newlist*)

Remarks

Values passed in Set_Property:

Value	Description
<i>newlist</i>	Data items to appear in the specified control. Rows are delimited by @FM, and columns are @VM-delimited.

Returns

Values returned by both Get_Property and Set_Property:

Value	Description
<i>itemlist</i>	For combo box and list box, an @FM-delimited array of items.
	For edit table an @FM-delimited array of rows, where columns are @VM-delimited.
<i>existingprop</i>	List of values, when Set_Property was run. That is, the values before they were changed.
