

MODAL

Applies to

System.

Description

Allows you to disable all existing (at the time the property is set) windows, or all windows that belong to the OpenInsight application.

Usage

modtype = **Get_Property** ("SYSTEM", "MODAL")

modality = **Set_Property** ("SYSTEM", "MODAL", *value*)

Remarks

value is an @FM-delimited array:

Value	Description
<i>value</i> <1>	0 = No modality.
	1 = Application modality.
	2 = System modality.
<i>value</i> <2>	Optional. Can be used for Set_Property only. Name of one exception window.

Caution: Be careful when you set the MODAL property if it is already set. When you turn MODAL back off, you will undo the previous MODAL setting.
