

QBFPOS

Applies to

Window

Description

Returns the absolute position of the current Native Tables record in a QBF (Query By Form) list.

Usage

pos = **Get_Property** (*windowname*, "QBFPOS")

oldpos = **Set_Property** (*windowname*, "QBFPOS", *number*)

Remarks

Value	Description
Number	Sets an explicit record to be returned by a Query by form.

Note

A QBF list must be created before QBFPOS is set.
