# RTFTEXT

## Applies to

Edit box.

### Description

Set and retrieve RTF text from an edit box which has the Rich Editor property set.

When using Get\_Property, RTF will be returned regardless of whether the text was formatted using RTF code or using the SetCharFormat message.

### Usage

```
rtftext = Get_Property (objectname, "RTFTEXT")
existingrtftext = Set_Property (objectname, "RTFTEXT", text)
```

### Remarks

Values passed in Set\_Property():

Value	Description
text	RTF formatted text.

#### Returns

Values returned by Get\_Property and Set\_Property

Value	Description
rtftext	The RTF text within the edit box. The text returned is CRLF delimited.
existingrtftext	The existing RTF text, when Set_Property was run.

# Example

```
Declare function Get_Property, Set_Property

rtftext = '{\rtf1\ansi\ansicpg1252\deff0\deflang1033'
rtftext:= '{\fonttb1{\f0\fswiss\fcharset0 Arial;}}'
rtftext:= '{\*\generator Msftedit 5.41.15.1507;}'
rtftext:= '\viewkind4\ucl\pard\f0\fs20 '
rtftext:= 'This is line of text with a \b bold\b0'
rtftext:= '\i italicized\i0 \b\i word\b0\i0 .'
rtftext:= '\par}'
x = Set_Property(@window:'.EDITBOX','RTFTEXT',rtftext)
```
