

SELPOS EX

Applies to

(Hierarchical) list box

Description

Returns the expanded position of the selected item in a (hierarchical) list box.

Usage

selecteditem = **Get_Property** (*objectname*, "SELPOS_EX")

Get_Property returns an @FM-delimited array for the selected item in the list, where:

Parameter	Description
<1>	Position of the selected item in the (fully expanded) list (LIST_EX).
<2>	Indent of selected item.
<3>	Number of "leafs" in the next level: 0 = None.
	Positive number, if leafs are visible.
	Negative number, if leafs are invisible.
<4>	Position in list (SELPOS value).
<5>	Position of predecessor (immediately preceding "branch").
