

TABLE

Applies to

Database associated controls.

Description

Returns the name of the table linked with the specified control. Use with `Get_Property`, only.

Usage

associatedtable = **Get_Property** (*objectname*, "TABLE")

Returns

The value returned by `Get_Property` is:

Value	Description
<i>associated table</i>	Table or tables associated with the specified control. If an edit table (or other control) has multiple columns, then the tables associated with each column will be returned @SVM-delimited.
