

# VALUES

## Applies to

Tab control

## Description

Returns or sets the values within a tab control. This is an @fm-delimited array of values.

## Usage

*currentVal* = **Get\_Property** (*objectname*, "VALUES")

*lastVal* = **Set\_Property** (*objectname*, "VALUES", *newVal*)

## Example

```
declare function Get_Property
declare subroutine Set_Property
retval = Get_Property(@window : '.TABCONTROL_1', 'VALUES')
Set_Property(@window : '.TABCONTROL_1', 'VALUE', 1 : @fm : 2 : @fm : 3)
```
