VPOSITION

Applies to

Vscroll bar, Window.

Description

Returns or sets position of slide in a vertical scroll bar. The scroll bar can be in a window, or can be a discrete scroll bar control.

Usage

position = **Get_Property** (*objectname*, **"VPOSITION"**)

existingposition = **Set_Property** (*objectname*, **"VPOSITION"**, *position*)

Remarks

position is an @FM-delimited array of:

Position	Description
Position<1>	Current slide position.
Position<2>	Least slide position.
Position<3>	Greatest slide position.
Position<4>	Slide increment (defaults to 1).

To hide the vertical scroll bar for a window, for example, a multi-page form, set the current, least, and greatest slide positions to 1 by setting the VPOSITION property to 1:@fm:1:@fm:1
