

SetUTF8 Subroutine

Description

Establishes whether or not string data is interpreted as UTF-8 or ANSI.

Syntax

SetUTF8(*onoff*)

Note

This is the programmatic equivalent as checking or unchecking the [UTF8 Character Mode checkbox](#) in the System Editor, Form Designer, or Application Properties.

The SetUTF8 subroutine has the following parameter.

Parameter	Description
onoff	1=UTF-8 mode , 0 = ANSI mode

See Also

[IsUTF8\(\)](#)

Example

```
* characters are interpreted as UTF-8
call SetUTF8(1)
* processing with characters interpreted as UTF-8
call SetUTF8(0)
* processing with characters interpreted as ANSI.
```
