

XOSetProperty Function

Description

Sets a Connection Object property; the Connection Object is specified by the passed handle.

Syntax

flag = **XOSetProperty** (*hXO*, *property*, *value*, *arg*)

Parameters

The XOSetProperty function has the following parameters:

Parameter	Description
HXO	Handle to the Connection Object.
Property	See XOGetProperty() for list of properties.
value	Property specific.
arg	Property specific

XO properties are read-only and cannot be set.

Returns

True for success or **False** for failure.
