

COLWIDTH

Description

Set or retrieve width of one or more columns in an edit table control.

Applies to

Edit table.

Syntax

```
columnwidth = Send_Message(controlID, "COLWIDTH", columnno, newwidth)
```

Parameters

Parameters are as follows.

Parameter	Description
Columnno	Column position, beginning from 1. Use 0 to specify all columns.
Newwidth	If columnno > 0, newwidth indicates the width (in pixels) of the column. If columnno is 0, passes an @FM-delimited array of column widths to resize existing columns. Pass null, to leave width intact.

Returns

Returns specified column width(s) (if multiple columns, in an @FM-delimited array.
