

MOVE ROW

Description

Moves a row within an edit table from one position to another.

Applies to

Edit table.

Syntax

```
moveRow = Send_Message(controlID, "MOVE_ROW", fromRow, toRow)
```

Parameters

Parameters are as follows.

Parameters	Description
fromRow	Integer. The position of the row to be moved.
toRow	Integer. The position that the row should be moved to. To move a row to the end of a table, the toRow value should be -1.

Returns

Returns the new position of the row.
