

POS BY TEXT

Description

Locates a string in a list or combo box.

Applies to

Combo box and list box.

Syntax

```
textposition = Send_Message(controlID, "POS_BY_TEXT", findtext, startpos [, matchflag])
```

Parameters

Parameters are as follows.

Parameters	Description
Findtext	Text to find. It is sufficient to specify just the first characters of desired text.
Startpos	Position of item before the first item to be searched. Use 0 to search the entire list.
Matchflag	Set true, if you require an exact match. The default value is false. A partial match starts at the first character and then searches to the right.

Return value

Position of the matched list item (starting with 1), or 0 if search was unsuccessful.
