

SCROLL

Description

Scrolls a window the amount specified in xshift and yshift.

Applies to

Windows.

Syntax

```
result = Send_Message(windowname, "SCROLL", xshift, yshift)
```

Parameters

For SCROLL, the Send_Message function has the following parameters.

Parameters	Description
Windowname	A valid, executing window.
Xshift	Horizontal movement, in pixels.
Yshift	Vertical movement, in pixels.

If windowname is valid, and xshift and yshift are valid, then the SCROLL message causes the window to scroll accordingly.

Return value

True, if ok; **false**, if not legal.
