

SELPOS EX BY POS

Description

Position of a non-visible list item in a hierarchical list.

Applies to

(Hierarchical) list box.

Syntax

```
position_ex = Send_Message(controlID, "SELPOS_EX_BY_POS", position)
```

Parameters

For SELPOS_EX_BY_POS, [Send_Message\(\)](#) has the following parameters.

Topic	Description												
Position	The position in the visible list (SELPOS).												
position_ex	The extended position information: <table border="1"><thead><tr><th>Value</th><th>Description</th></tr></thead><tbody><tr><td><1></td><td>Position of selected item in the (fully expanded) list (LIST_EX).</td></tr><tr><td><2></td><td>Level of selected item.</td></tr><tr><td><3></td><td>Number of "leafs" in the next level. 0 = None. Positive numbers indicate "leafs" are visible. Negative numbers indicate "leafs" are invisible.</td></tr><tr><td><4></td><td>Position in list (SELPOS value).</td></tr><tr><td><5></td><td>Position of (immediate) predecessor.</td></tr></tbody></table>	Value	Description	<1>	Position of selected item in the (fully expanded) list (LIST_EX).	<2>	Level of selected item.	<3>	Number of "leafs" in the next level. 0 = None. Positive numbers indicate "leafs" are visible. Negative numbers indicate "leafs" are invisible.	<4>	Position in list (SELPOS value).	<5>	Position of (immediate) predecessor.
Value	Description												
<1>	Position of selected item in the (fully expanded) list (LIST_EX).												
<2>	Level of selected item.												
<3>	Number of "leafs" in the next level. 0 = None. Positive numbers indicate "leafs" are visible. Negative numbers indicate "leafs" are invisible.												
<4>	Position in list (SELPOS value).												
<5>	Position of (immediate) predecessor.
