

Report Builder must be started from the repository outline by pressing **SHIFT+double-click** on the OpenInsight window executable **ORMAIN**. A sample report definition (**List**) shows the Product ID, Description, and Price. This report definition is shown below:

Preview the report (as shown in the figure below) and save it when you are satisfied with the layout. The report displays similarly to the display shown below:

This report can now be published to the Web in HTML format. An example of such a report is shown below.

From a Web browser, the report is run using `inet_Rlist()`, passing the **Report_ID** parameter, as shown below:

http://127.0.0.1/cgi-bin/oecgi.exe/inet_rlist? REPORT_ID=List
