COPYFILE Service

Description

Copies an operating system file to another operating system file.

Note: This is a Windows only function.

Syntax

```
result = UTILITY("COPYFILE",srcfile, destfile)
```

Parameters

The COPYFILE service has the following parameters.

Parameter	Description
srcfile	Specifies an operating system file or list of files. The file name includes the operating system drive and path.
destfile	Specifies the name of the destination table.
result	A boolean value. If true then the copy was successful otherwise an error occurred.

Note

If *destfile* exists and *overwriteflag* = 1, the file is copied and *result* = 1. The nonzero *result* does not indicate an error, but rather that *destfile* was overwritten.
