

NEGATE

Negates a value.

Syntax

```
Result = SRP_Math("NEGATE", Value, "", DecimalPlaces, ScientificNotation)
```

Returns

The negation of *Value*.

Remarks

The NEGATE operation negates *Value* and returns the results. If *Value* was negative, the result is positive and vice versa. You can use NEG for short.

Example

```
// Negate PI
Val = "3.1415926535897932384626433832795"
Result = SRP_Math("NEGATE", Val)
!! Result = -3.1415926535897932384626433832795 !!
```

```
// Negate it again
Result = SRP_Math("NEG", Result)
!! Result = 3.1415926535897932384626433832795 !!
```
