

Repository Function CLEARMODULE

Description

Method for clearing all module identifiers from a repository entity.

Syntax

```
retval = Repository("CLEARMODULE", entID)
```

Parameters

The **CLEARMODULE** method has the following parameters.

Parameter	Description
<i>Message</i>	CLEARMODULE
<i>entID</i>	entID consists of four elements, which are '*' (asterisk) delimited:
	<ul style="list-style-type: none">• Application name• Type ID• Class ID• Entity name

Returns

Null.

Remarks

The module name is field 8 within the SYSREPOS record for the Entity. The module name allows for the creation of named modules within OpenInsight. The RDK tool has an option within the Repository View creation to create RDKs based on Modules. The RDK tool will then build deployments based on the module name.

This is available in OpenInsight 9.2 and above. It is currently a programmatic function only. The IDE does not currently have a tool to create and organize Modules.

Note: Always call the [Get_Status function](#) after calling *Repository*.

Example

```

* Clear Module Names for an Entity
Declare Function Repository
* Create an array of entities to use Module methods against
reposStack = ""
reposStack := @appid<1> : "**OIWIN**CUSTOMERS" : @fm
reposStack := @appid<1> : "**OIWINEXE**CUSTOMERS" : @fm
reposStack := @appid<1> : "**POPUP**CUSTOMERS"
moduleName = "CUSTOMER_INVOICE"
* Clear all Module names from the entities in reposStack
rPos = 0
rFlag = ""
module = ""
Loop
    Remove thisEntity From reposStack at rPos setting rFlag
    var = Repository( "CLEARMODULE", thisEntity )
    If Get_Status(ErrCode) then
        call msg(@window, 'Error Message returned: ' : ErrCode)
    end
    While rFlag
Repeat

```
