# Module Manager

The Module Manager is a window used to manage SYSREPOSMODULES records. A SYSREPOSMODULES record can be created and edited using this window. The Module Manager will add and remove Module tags from the SYSREPOS records of the Entities added to or removed from the SYSREPOSMODULES record.

Control	Description
Module Id edit line	Enter the name of the Module to be edited. The modules are stored in the SYSREPOSMODULES table. The search button to the right of the Module Id will display a popup of saved Modules.
Repository Type /Class list	A hierarchical list of Repository Types and Classes within the application. When a Type or Class is selected the entities within the type/class are displayed in the Entities list box for selection.
Entities list	A list of Entities contained in the Type/Class selected in the Repository Type/Class list. Multiple selection of Entities is permissable.
Entities in Module table	A list of repository items contained in the current SYSREPOSMODULES record.

Add Selected Entities button	Clicking this button will add the entities that are selected in the Entities list box to the Entities in Module table.
Remove Selected Entities button	Clicking this button will remove the entities that are selected in the Entities in Module table from the table.
Remove All button	Clicking this button will remove all the entities within the Entities in Module table from the table.
Save button	Saves the SYSREPOSMODULES record.
Close button	Closes the window.
Clear button	Clears the window.
Help button	Displays the Help topic.
