SRP_Json Add

Adds a JSON Entity to a JSON array.

Syntax

```
Result = SRP_Json(Handle, "Add", NewEntityHandle)
```

Returns

Returns 1 if successful, 0 if not.

Parameters

Parameter	Description
Handle	Handle to JSON Entity. **Required.**
NewEntityHandle	New JSON entity to be added to the JSON array. **Required.**

Remarks

The Add service adds the given entity (which must be a valid JSON Entity Handle) to the end of the array. This only works if Handle is a JSON array.

Example

```
 // Create a JSON array (which initializes ArrayHandle)
If SRP_Json(ArrayHandle, "New", "Array") then

   // Create a JSON number
   If SRP_Json(NumberHandle, "New", "Number", "12345") then

       // Now add the number to the array
       SRP_Json(ArrayHandle, "Add", NumberHandle)

       // Remember to release entities you've created
       SRP_Json(NumberHandle, "Release")

   end

   // Remember to release entities you've created
   SRP_Json(ArrayHandle, "Release")

 end
```
