

SRP_HashTable_GetValues

Gets all the values stored in an SRP Hash Table in no particular order.

Syntax

```
ValueList = SRP_HashTable_GetValues(Handle, Delim)
```

Returns

A delimited list of the values stored in the hash table

Parameters

Parameter	Description
Handle	Handle to an existing SRP Hash Table (REQUIRED)
Delim	Delimiter to insert between values (OPTIONAL, @FM by default)

Remarks

The SRP_HashTable_GetValues returns all the values stored in the hash table as a delimited list. The list will be delimited by the character you pass through the Delim parameter. If you omit the Delim parameter, then the list will be delimited by field marks.

IMPORTANT: You should always release the handle to an SRP Hash Table when you no longer need it by calling [SRP_HashTable_Release](#).

Examples

```
// Get the values delimited by field marks
ValueList = SRP_HashTable_GetValues(Handle)

// Get the values delimited by commas
ValueList = SRP_HashTable_GetValues(Handle, ",")
```
