

SRP TcpClient CLOSE SES

Closes a connection to the SRP Engine Service.

Syntax

```
SRP_TcpClient(Object, "CLOSE_SES")
```

Returns

Always returns 1.

Remarks

The CLOSE_SES service must be called to close a connection to the SRP Engine Service, otherwise the connection remains open until OpenInsight closes. The Object parameter is a handle to an existing connection. CLOSE_SES differs from the [CLOSE](#) service in that it sends a command to the server prior to closing to ensure a clean disconnect.

Example

```
// Connect to a local SRP Engine Service and then close
TcpClientHandle = 0
If SRP_TcpClient(TcpClientHandle, "CONNECT", "127.0.0.1", "7777") then
    SRP_TcpClient(TcpClientHandle, "CLOSE_SES")
end
```
