

RTI OS Directory function Choose

Description

Calls the Common Windows File dialog window, modifying the dialog to display and return only directory information.

Syntax

```
directory = RTI_OS_Directory( "CHOOSE" <, directory> <, title> )
```

Parameters

directory	<Optional> The initial directory to be displayed.
title	<Optional> The title to display in the dialog window.

Return Value

The full path to the directory chosen.

Example 1

```
declare function RTI_OS_Directory

// displays the choose directory dialog window with the initial directory set to c:\revsoft
// and with the text "Choose a directory" displayed in the dialog window
directory = "c:\revsoft"
title = "Choose a directory"
result = RTI_OS_Directory( "CHOOSE", directory, title)
```
