

Set Printer POS

Description

The POS message is used to set the current printing position for the [TEXT](#), [TEXTCOL](#), [ADDTABLE](#), and [TABLE](#) `Set_Printer()` messages.

Parameters

Parameter	Description of Fields	Comments	Default
Parm1 - POS	<1> X	Current X pos	""
	<2> Y	Current Y pos	""

Remarks

Most [Set_Printer\(\)](#) messages will ignore the X position, because they print at the left margin and use the current justification from the `FONT` message.

Example

```
/* The following example shows how to use the POS message to print text at 3 inches below the top margin. */

declare function Set_Printer
stat = Set_Printer("INIT") /* Start printing
stat = Set_Printer("POS", 0:@FM:3.0)
stat = Set_Printer("TEXT", "Test 1 2 3 . . . ")
stat = Set_Printer("TERM") /* End printing
```
