

Set Printer TEXT

Description

The **TEXT** message is used to send standard text to the printer. Use @FM to separate multiple lines of text. The font that is set with the [FONT](#) message will be used for printing by the **TEXT** message. The text that is printed will automatically perform word wrapping at the end of the line and at the @FM delimiter. Use the [INIT](#) message to adjust the margins of the printable area. To print a blank line do not pass the TextString parameter or set the TextString parameter to NULL. A page break is automatically sent at the end of the page.

Parameters

Parameter	Description of Fields	Comments	Default
Parm1 - TextString	<1> TextString	"Text String" - @FM between lines	""

Example

```
/* The following example shows how to use the TEXT message to print three lines of text. */

declare function Set_Printer
stat = Set_Printer("INIT") /* Start printing
text = "This is line 1,This is the second line,Last line"
convert "," to @fm in text /* Use @FM delimiter
stat = Set_Printer("TEXT", text) /* Print 3 lines of text
stat = Set_Printer("TERM") /* End printing
```
