

Set Printer TEXTXY

Description

The **TEXTXY** message is used to send output to the printer at a specific position.

Parameters

Parameter	Description of Fields	Comments	Default
Parm1 - TextString	<1> TextString	"Text String"	""
Parm2 - Location	<1> X <2> Y	Starting X position Starting Y position	0 0
Parm3 - Font	Same structure as Parm1 of the FONT message.	Font structure.	Current font
Parm4 - Repeat	<1> Repeat on all pages	0=Current page only 1=Print on all pages	1

Remarks

The Location parameter sets the starting position. If the Font parameter is not specified, then the font is set to the current font from the [FONT](#) message. Use the Font parameter to print a specific font. This is useful when printing the **TEXTXY** on every page with the same font, because the font that is set with the [FONT](#) message may change during printing. The Repeat parameter is used to repeat the text on every page.

Example

```
The following example shows how to use the TEXTXY message to print text on the page.
declare function Set_Printer
stat = Set_Printer("INIT") /* Start printing
for i = 1 to 5
text = "The X pos = ":i: " The Y pos = ":i
stat = Set_Printer("TEXTXY", text, i:@fm:i) /* Prints at a diagonal
next i
stat = Set_Printer("TERM") /* End printing
```
