

UTF8 Character Mode checkbox

A check box, called UTF8 character mode, has been added to the Application Properties window, accessed from the OpenInsight Main Menu choice File-Application Properties. If checked, the application will run with UTF-8 Unicode character conversion. If unchecked (the default), the application will run in ANSI mode, identically as in OpenInsight versions before 4.1.

The Application Properties window, with the UTF8 character mode check box checked, is shown below:

The screenshot shows the 'Application Properties' dialog box. The 'Application' section on the left contains fields for 'Title', 'Inheritance' (set to 'SYSPROG'), 'Created' (set to '01/14/02 08:49AM'), and 'Database' (set to 'EXAMPLES'). Below these are two checkboxes: 'Maintain Database Columns in the Repository' (unchecked) and 'UTF8 character mode' (checked). The 'Author's' section below has 'Name' set to 'EXAMPLES' and an empty 'Company' field. The 'Entry Point' section at the bottom left has 'Window Name' set to 'EXAMPLES_MAIN' and a 'Setup Entry Point...' button. The right side of the dialog has three sections: 'Creation Permit' with a 'User' field containing 'EXAMPLES' and 'IRA', and a 'Create Permission...' button; 'Document Reference' with 'Class' and 'Entity' headers and an empty text area, and a 'Relate Document...' button; and 'Logon Banner' with a 'Banner Name' field and a 'Setup Logon Banner...' button. At the bottom are 'OK', 'Cancel', 'Help', and 'Abstract...' buttons.
