

# UTF8 Character Mode checkbox

A check box, called UTF8 character mode, has been added to the Application Properties window, accessed from the OpenInsight Main Menu choice File-Application Properties. If checked, the application will run with UTF-8 Unicode character conversion. If unchecked (the default), the application will run in ANSI mode, identically as in OpenInsight versions before 4.1.

The Application Properties window, with the UTF8 character mode check box checked, is shown below:

The screenshot shows the 'Application Properties' dialog box. The 'Application' section on the left contains fields for 'Title', 'Inheritance' (set to 'SYSPROG'), 'Created' (set to '01/14/02 08:49AM'), and 'Database' (set to 'EXAMPLES'). Below these is a checkbox for 'Maintain Database Columns in the Repository' (unchecked) and a checked checkbox for 'UTF8 character mode'. The 'Author's' section has 'Name' set to 'EXAMPLES' and an empty 'Company' field. The 'Entry Point' section has 'Window Name' set to 'EXAMPLES\_MAIN'. The 'Creation Permit' section on the right has a 'User' field containing 'EXAMPLES' and 'IRA', and a 'Create Permission...' button. The 'Document Reference' section has a table with columns 'Class' and 'Entity', an empty body, and a 'Relate Document...' button. The 'Logon Banner' section has a 'Banner Name' field and a 'Setup Logon Banner...' button. At the bottom are 'OK', 'Cancel', 'Help', and 'Abstract...' buttons.
