

U2 Functions in OI U2 ExecProc

Description

Executes U2 functions on the U2 back end. This function returns Intercall status codes and sets @FILE.ERROR with error details.

Syntax

```
result = U2_ExecProc(VolumeID, Command, Buffer, Reply, Interactive)
```

Parameters

The function has the following parameters:

Parameter	Description
VolumeID	Volume pointer name to base the virtual session on.
Command	The server command line to execute.
Buffer	The buffer contains the return data resulting from the command.

Returns

Status Codes

Code	Description
-1	Invalid arguments.
0	Execution complete. This does not necessarily mean that the procedure was successful.
1	General failure. @FILE.ERROR will contain detailed information.
n	Other. See Intercall Documentation.

Remarks

The buffer can handle lengths up to 2048 characters.

Example

```
declare function u2_execproc

VolumeID = 'mylaptop6100b:UV'

Command = 'RUN BP LIST.INDEX'

buffer = ''

result = u2_execProc(VolumeID, Command, Buffer)

* get rid of extra spaces

buffer = trim(buffer)

x = msg(@window, trim(Buffer) )
```
