

# U2 Functions in OI U2 ExecIType

## Description

Executes a U2 I-type calculation.

## Syntax

result = U2\_ExecIType(sourceFileName,sourceDictID)

## Parameters

The function has the following parameters:

| Parameter      | Description                                                       |
|----------------|-------------------------------------------------------------------|
| sourceFileName | The name of the file containing the dictionary item to calculate. |
| sourceDictID   | The name of the dictionary item to calculate.                     |

## Returns

The result of the calculation.

## Remarks

This is the OpenInsight equivalent of the IC\_ITYPE call.
