

# U2 Functions in OI U2 Getlist

## Description

Retrieve a list of keys set using the U2\_SaveList subroutine.

## Syntax

U2\_GetList(ListName, VolumeName, SelNum)

## Parameters

The function has the following parameters:

Parameter	Description
ListName	The name of the saved list to retrieve.
VolumeName	The volume on which the list was saved.
SelNum	The cursor to use when retrieving the list.

## Returns

This subroutine does not return a value. Use Get\_Status() to check for errors.

## Example

```
Declare subroutine Rlist, U2_SaveList, FsMsg

* Retrieve the list on the U2 Server.

U2_GetList("CUSTOMER_LIST", "U2_VOLUME_1", 3)

If Get_Status(errCodes) then

    FsMsg(errCodes)

end else

    keyList = ""

    loop

        readnext id else done = 1

    until done

        keyList := id : @fm

    repeat

        keyList[-1,1] = "" ; * remove the trailing @fm

end
```
