REQUIRED

Applies to

Edit line, edit box, edit table.

Description

When true, requires control to contain data. Used primarily with database linked controls.

Usage

status = **Get_Property** (*objectname*, **"REQUIRED"**)

oldstatus = **Set_Property** (*objectname*, **"REQUIRED"**, *newstatus*)

Remarks

Required processing is done on LOSTFOCUS, so return 1 (instead of 0) in your LOSTFOCUS event code to enable required processing. Controls set as required are also checked during the WRITE event.
