

SRP_Taskbar

Manipulates the Windows taskbar.

Syntax

```
Result = SRP_Taskbar(Service, Param1)
```

Returns

The meaning of the return value depends on the service.

Parameters

Parameter	Description
Service	The action to be performed against the taskbar. Required .
Param1-N	The service parameters. ' Optional '. See Remarks for details.

Remarks

The SRP_Taskbar function provides useful services for manipulating the Windows taskbar.

Service

The SRP_Taskbar function currently provides only one service, but future services are under consideration.

Service	Description
SET_GROUP_TITLE	Changes the title text used when the application's taskbar buttons are grouped.

Click on the service names above to read more details. Continue below for an explanation of the Key parameter.

Param1-N

The remaining parameters are unique to each service. Click on the service above to get details on the expected parameters.
