

SnapEnabled

Determines whether or not appointments are snapped to the nearest interval.

Added in 4.1.18

Usage

```
Set_Property(OLECtrlEntID, "OLE.SnapEnabled", Boolean)
```

Values

[True | False]

Default: True

Remarks

The SnapEnabled property affects how appointments are moved and resized. By default, appointments are snapped to the nearest time interval. If you prefer pixel-perfect movement, set this property to False.

Example

```
// No snapping  
Set_Property(@Window:".OLE_SCHEDULE", "OLE.SnapEnabled", No$)
```
