

PropertyProtect

Used to set if the property can be edited, selected, or protected (disabled).

Usage

```
SRP_PropertyPanel(PanelsCtrl, "PropertyProtect", PropertyKeys, Protect, Hard)
```

Parameters

PropertyKey

A key to the property value to enable/disable. Multiple keys can be passed FM delimited.

Protect

Full	FUL
Selectable	SEL
None	NON

Hard

1 to show a "hard" full protection display, which grays out the property value.
