

SRP_Mail

SRP Mail is a wrapper round [SRP_Send-Mail](#) to simplify sending emails programmatically.

 Added in 2.2

Important: SRP_Mail requires RevDotNet. You must run OpenInsight's Client Install to ensure RevDotNet is functional.

Services

Method	Description
Send	Sends an email using TLS security protocol. <i>Recommended.</i>
SendUnsecure	Sends an email without any encryption.
SendUsing	Sends an email using a custom Port.
