

CaptionList

Convenient way to set all tabs' captions at once.

Usage

```
Set_Property(OLECtrlEntID, "OLE.CaptionList", Value)
```

Values

Comma delimited list of tab captions.

Default: ""

Remarks

The CaptionList property is a quick way to set the captions of all your tabs. Normally, you would set the [TabCount](#) property to the number of desired tabs, then use the [TabCaption](#) property to set each tab's caption individually. This property sets the captions in a single call, though you do still have to set the TabCount first.

Example

```
// The long way
Set_Property(@Window:".OLE_TAB", "OLE.TabCount", 3)
Set_Property(@Window:".OLE_TAB", "OLE.TabCaption[1]", "Contacts")
Set_Property(@Window:".OLE_TAB", "OLE.TabCaption[2]", "Invoices")
Set_Property(@Window:".OLE_TAB", "OLE.TabCaption[3]", "Reports")

// The short way
Set_Property(@Window:".OLE_TAB", "OLE.TabCount", 3)
Set_Property(@Window:".OLE_TAB", "OLE.CaptionList", "Contacts,Invoices,Reports")
```
