

FillParentBackground

Uses the FillParentBackground to render the parent form's entire background.

Usage

```
Set_Property(OLECtrlEntID, "OLE.FillParentBackground", Boolean)
```

Values

[*True* | *False*]

Default: False

Remarks

The FillParentBackground property is something we added so we could add [ColorFill](#) technology to the entire background of an OI form. First, you set the [CustomPaneColor](#) property to the ColorFill you desire. Then set this to 1 to force the entire form's background to use the ColorFill no matter the size or location of the tab control.

Example

```
// Make the entire background use a light gray gradient
Set_Property(@Window:".OLE_TAB", "OLE.AllowXPTheme", 0)
Set_Property(@Window:".OLE_TAB", "OLE.CustomPaneColor", "Vertical(Gradient(White, Gray))")
Set_Property(@Window:".OLE_TAB", "OLE.FillParentBackground", 1)
```
