

OnMinimizeChange

Fired when the ribbon minimizes or maximizes.

Parameters

Parameter	Description
IsMinimized	1 if the ribbon just minimized, 0 if it just maximized.

Remarks

The OnMinimizeChange fires when the user changes the minimized state of the ribbon. You can use this to respond to the change, such as updating the caption of a button that caused the change.

Example

```
OLE_RIBBON.OnMinimizeChange:  
  
    // Get parameters  
    IsMinimized = Param1  
  
    // Update the min/max button  
    If IsMinimized then  
        Set_Property(@Window:".MINIMIZED_BUTTON", "TEXT", "Maximize")  
    end else  
        Set_Property(@Window:".MINIMIZED_BUTTON", "TEXT", "Minimize")  
    end  
  
return
```
