Theme

The theme used to render the calendar.

Usage

```
Set_Property(OleCtrlEndId, "OLE.Theme", OptionValue)
```

Values

OptionValue can be set to one of the following valid options:

Value	Description
Office2013	The theme utilized in Office 2013
Office2010Blue	The blue theme utilized in Office 2010
Office2010Black	The black theme utilized in Office 2010
Office2010Silver	The silver theme utilized in Office 2010
Office2007Blue	The blue theme utilized in Office 2007
Office2007Black	The black theme utilized in Office 2007
Office2007Silver	The silver theme utilized in Office 2007
Office2007Aqua	The theme utilized in the beta releases of Office 2007
Windows7	A theme based on the look of Windows 7
Office2003	The theme utilized in Office 2003
OfficeXP	The theme utilized in Office XP
Office2000	The theme utilized in Office 2000

Default: Office2010Blue

Remarks

The Theme property sets the look of the calendar, and it can mimic every version of MS Office since Office 2000. Simply set one of the aforementioned options and you're done. You can pass any abbreviation so long as it can be reasonably recognized as unique. If the property does recognize the given option, it defaults to "Office2000". For example, "07" will be recognized as "Office2007Blue", but "Office" or "Black" will not because they are too ambiguous in and of themselves.

Example

```
// Set the theme to Windows 7
Set_Property(@Window:".OLE_CALENDAR", "OLE.Theme", "Windows7")

// Set the theme to Office 2010 Silver using an abbreviation that is recognizable
Set_Property(@Window:".OLE_CALENDAR", "OLE.Theme", "10Sil")
```
